

Week 1 – Excel & Data Fundamentals

Practice Set + Week 1.1 Solutions

Dataset used: Global Superstore 2016 – Orders sheet.

Practice 1: Remove duplicates and handle missing values

Duplicates found: 0. Missing cells found: 41296. Duplicates were removed and remaining missing numeric/text/date values were handled in Cleaned_Data.

Practice 2: Region-wise sales Pivot Table

See Region_Sales sheet. It summarizes Total Sales by Region.

Practice 3: Mean, median, and mode

Mean = 246.49; Median = 85.05; Mode = 12.96. Excel formulas are shown in Statistics.

Practice 4: Top 10 sales

See Top_10_Sales sheet. It contains the 10 highest sales transactions and conditional formatting on the Sales column.

Practice 5: Category-wise revenue bar chart

See Category_Revenue sheet and the Dashboard for the completed bar chart.

Week 1 Project: Pivot Table Dashboard

Dashboard includes Total Revenue, Sales by Category, Yearly Sales Trends, and Department-wise Revenue using Segment as the available department-like grouping in the supplied dataset.

Key Excel Formulas

Purpose	Formula
Mean	=AVERAGE(Cleaned_Data!S:S)
Median	=MEDIAN(Cleaned_Data!S:S)
Mode	=MODE.SNGL(Cleaned_Data!S:S)
Variance	=VAR.S(Cleaned_Data!S:S)
Top 10 (concept)	Use Conditional Formatting → Top/Bottom Rules → Top 10 Items

Important: The supplied dataset has a Segment field rather than a field literally named Department. The dashboard therefore uses Segment for the requested department-wise revenue analysis.
